# Integral RemoteControl Panel. Information and monitoring regardless of location.

## Trust is good, control is better.

Imagine the scene, it is late in the evening or even in the night, and the night watchman makes his compulsory check of your company's fire alarm system whilst on his rounds. However, he is unable to explain some of the items displayed on the operating panel. He wants to call upon the company's in-house security expert's expertise, but he has long since gone home. He's not in a position to be able to give advice from home. Consequently, he has to travel to the company's premises either in the late evening or during the night to check whether the fire alarm system is working properly. Such situations are confined to history thanks to Schrack Seconet's Integral RemoteControl Panel. The expert simply needs to sit down in front of his PC at home, and in a matter of seconds he has a comprehensive overview.

## The operating panel that is always visible.

This software tool offers the user countless advantages:

- It allows the operating panel of a

BMZ Integral system to be monitored in real time from anywhere in the world.

- The operating panel appears at full size on the monitor in front of the user, as if the user were standing immediately in front of it.
- The security staff member is able to quickly inform the owner of the company, the CEO and other staff members. Long travelling distances or hectic telephone calls are therefore eliminated.
- It is possible to organise the grouping together of the monitoring of several systems.

Schrack Seconet fire alarm systems always set new standards in security. In the event of an emergency, the time factor can also play a decisive role. It was therefore logical to expand the product range to include the Integral RemoteControl Panel. In the event of there being a problem, the person who is responsible for the system can sit in front of the computer at home - without losing valuable time - and have the same level of information at his disposal as he would if he were on site.

### **Ideal addition to the SMS-C Box.**

In conjunction with Schrack Seconet's SMS-C Box, the Integral RemoteControl Panel forms a formidable team. In the event of an alarm or fault being reported, the SMS-C Box automatically sends the most important information to all mobile phone numbers saved in its memory. The fire prevention office, the division head or the owner of the company can react straightaway. With the relevant secure access privileges, the relevant person can determine the status of the fire alarm control panel in real time on his PC.

### **Multi-level Security Concept.**

In an area as sensitive as fire prevention, it goes without saying that a detailed multi-level security concept is also required. So that only authorised staff members are able to access the system, Schrack Seconet's experts have built in a so-called "Call back function". The connection from the fire alarm control panel to the responsible person is only made once identification via a username and password has been successful. Only then is access possible. Furthermore, all access data is saved in the control panel's software in encrypted form.

### **User friendly System Requirements.**

During the development process of the Integral RemoteControl Panel, particular emphasis was placed upon ensuring the computing resources of the customer's PC were used as sparingly as possible. A standard PC and a connection to allow data transfer are all that is required to use the system externally. For access from within the company's premises, the fire alarm

system can be connected to any PC within the company's network via the serial interface, thus allowing connection with the fire alarm control panel.

### **Multilingual.**

Even as far as language compatibility standards are concerned, the Integral RemoteControl Panel fulfils the highest standards. Schrack Seconet's reputation as an international high tech company is maintained. The tool is available in more than 20 languages.

# Integral RemoteControl Panel. The tool for safety and comfort.

## The most important system features.

- Gives an overview and easy to use
- Easy to connect to the fire alarm control panel
- 1:1 depiction of the relevant fire alarm control panel's operating panel
- User interface language can be freely defined
- Low system requirements
- Comprehensive security concept

We are your partner for: • Fire alarm systems • Hospital communications • Communications in care homes and homes for the elderly • Security systems • Access control • Intrusion detection and video surveillance technology. As well as our range of technical solutions, we also offer a wide range of service, e.g. planning, installation and fitting, commissioning and system maintenance. Our range of services is rounded off by offering training for planners, constructors, technicians and users.
