Schrack Integral High End Operating Panel. Focussing on the most important facts.

An exact overview and precision control.

In stressful situations, such as in the event of an alarm occurring, not only absolute reliability and innovative features are required, but the focus must also be on the most important facts. Within seconds full, detailed answers are required to the questions: What exactly has happened? Where has the incident taken place? When did it happen? What action is required?

0001 ALARMS	0000 FAULTS	0000 DISABLEMENTS	0001 ACTUATIONS
0001			ZONE 2/1 ALARM
Flame detector actuated. CO2-extinguisher system actuated. Leave area immediately.			ADDITIONAL INFORMATION
			SITE INFO

It is exactly in such fiery situations that the innovative Integral High End Operating Panel, which conforms to European standards, proves its unique level of user-friendliness. Its clear structure and its intuitively comprehensible menu structure ensure that valuable time is not lost. Rapid and correct operation is ensured thanks to the clear assignment of keys, which allows complex functions to be carried out almost at ease. This allows you to also keep your cool in the event of an alarm.

Clear Statements.

The unique fully-graphical colour display is the heart of the Integral High End Operating Panel. All the relevant information is displayed clearly and succinctly – in almost any language in the world. Whether there is an alarm, a fault, a disablement or actuation – the intelligent system automatically displays every current state. In quickly and clearly assigning states, colour highlighting helps to assist you. The operating panel thereby suggests which courses of action to take.

Easy to operate.

The Integral High End Operating Panel is operated by means of multi function keys, so-called softkeys. A few key presses suffice for you to have exactly the information you require at your fingertips. Furthermore, the most important information is highlights in colour, thereby allowing at a glance recognition of what requires doing. The practical four way navigation allows you to scroll quickly and easily.

The High End Operating Panel is available with or without a log printer as per your requirements.

Keen to connect.

The Integral High End Operating Panel can be connected to an Integral subcontrol unit, a subcontrol unit loop or to the SecoNET fire alarm control panel network. It is fitted away from the control panel, and does not even have to be in the same room. It can be located up to a maximum of 1,200 metres from the control panel. This allows the operating panel to be installed where the information is actually required!

Schrack Integral High End Operating Panel.

High End Operating Panel: 230 x 445 x 35 mm (H x W x D)

High End Operating Panel with Printer: 360 x 445 x 45 mm (H x W x D)
